Development Services

WRITTEN COMMENT FORM

Our family home has been a landmark
on Old Highway 80 in Boulevard CA
for nearly a century. It is our
refuge from commerce and industry
carefully chosen by us because
of carefully crafted zoning regulations
designed to keep this land natural.

1.6.13

Reasons of concern

1 Water Table

- 1 it supports old growth trees
- 2 the entire area involved is a dry wash
- 3 it is home and refuge for frogs
- 4 waterfowl ie birds and their predators such as links bobcats, snakes, snakes
- 5 Erosion when land is stripped bare

As a responsible person can I in good conscience insure the safety of visitors to my house?

1 Sun glare and reflections

Our home is the focal point from sunup to sundown.

2 These panels are a weapon carelessly aimed at my home probably causing increased instance of skin cancers such as melanoma, cataracts, and blindness

3 Increases the natural hazards of traffic on both the I-8 and Old highway 80

We have nice generous sized yard which is fenced to allow our pets to play and run outside of the house. The risk of the sun reflection and ground discharges of electricity creates an unacceptable risk to our animals and children and grandchildren

5 Nuisance

This project is a public nuisance as planned.

The project is entirely contained in a natural water way, a river bed, sometimes navigable. Our home is on an island within this aforesaid waterway.

Should this project undergo construction public bonds should be made. The lights need to follow night sky protocol.

Our house

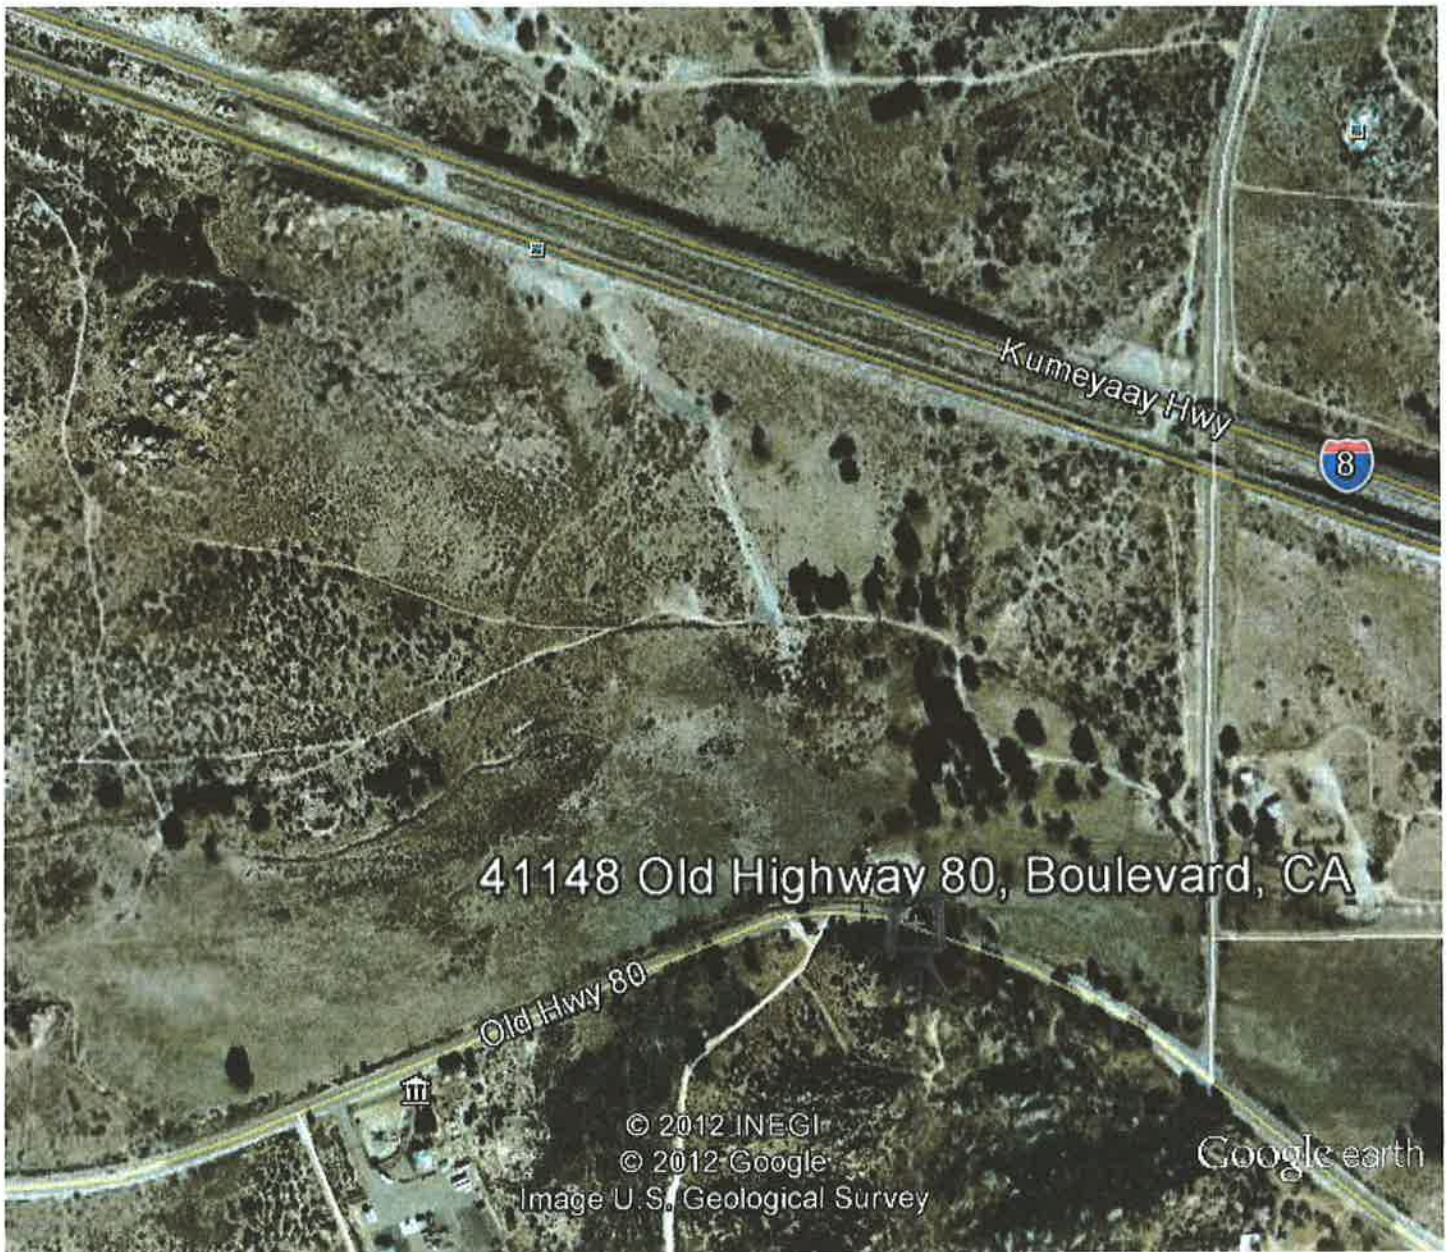

Top photo was taken of Soitec's UCSD demo CPV module on September 14, 2012

*1162 solar panels
aimed at my house*

These two photos, showing the close-to-blinding glare, were taken around 5:30 PM on October 4th, 2012 from inside the photographer's car as they were driving east by the Shiley Eye Center. Please note that the Soitec /Concentrix solar project developers, consultants, property owners, and other cheer leaders have consistently denied that the Soitec modules create adverse glint and glare impacts for adjacent residents, drivers on impacted roads, or for low flying Homeland Security and military aircraft.
